Mauritius tenders 220 MW of solar and storage via new 'e-Marketplace'

Mauritius has published tenders for solar plus storage projects totalling 220 MW. The tender is launched on a new E-Marketplace created by the International Solar Alliance, which aims to improve bankability and access to finance for projects in small island developing states (SIDS).

Mauritius tenders 220 MW of solar and storage via new 'e-Marketplace'

Mauritius has announced a tender for 220 MW of solar capacity, along with an unspecified capacity of battery energy storage systems (BESS), to be spread across ten 10 MW projects and three 40 MW projects. Originally launched in April, and closing in mid-July 2026, these tenders were highlighted this week at a Pacific SIDS Dialogue event held in Bali, Indonesia, thanks to their partnership with the World Bank and International Solar Alliance to launch a new 'e-Marketplace' for small island states to publish solar and storage tenders. The marketplace is described by ISA as "a live, transparent, ...

Bali, Indonesia, 3 June 2026: In a landmark convening of Pacific Island leaders, ministers, development partners, and private sector innovators, the International Solar Alliance (ISA) and World Bank Group co-hosted the first ISA SIDS Dialogue – Pacific, a flagship regional engagement under the ISA SIDS Platform. Themed ‘A Pacific Talanoa – Guided by the Ocean, Powered by the Sun’, the Dialogue brought together governments from Fiji, Papua New Guinea, the Solomon Islands, and Mauritius to translate high-level commitments on clean energy into bankable, on-the-ground implementation across Small Island Developing States (SIDS).

Mauritius has announced a tender for 220 MW of solar capacity, along with an unspecified capacity of battery energy storage systems (BESS), to be spread across ten 10 MW projects and three 40 MW projects.

Originally launched in April, and closing in mid-July 2026, these tenders were highlighted this week at a Pacific SIDS Dialogue event held in Bali, Indonesia, thanks to their partnership with the World Bank and International Solar Alliance to launch a new 'e-Marketplace' for small island states to publish solar and storage tenders.

The marketplace is described by ISA as “a live, transparent, readiness-based digital platform enabling island governments to list, compare, and advance projects with access to international developers and financiers.” It promises planned renewable energy projects improved visibility among global project developers, financiers and service providers as well as assistance to ensure bankability and support with bid evaluation, procurement and other stages.

»» **ISA–World Bank launch 220 MW solar tender for Mauritius through SIDS E-Marketplace at Pacific Dialogue in Bali**

The International Solar Alliance (ISA) and the World Bank Group co-hosted the first ISA SIDS Dialogue – Pacific in Bali on 3 June 2026, launching the first tender on the SIDS E-Marketplace for a 220 MW solar and solar-plus-battery storage pipeline in Mauritius comprising approximately ten projects. Pacific Island Countries currently spend over US\$1 billion annually on fossil fuel imports — nearly 80% of total energy expenditure. ISA Director General Ashish Khanna stated the SIDS Platform targets unlocking up to 500 MW of solar capacity by 2030.

Mauritius Launches 220 MW Solar And Storage Tender To Accelerate Renewable Energy Transition

By **Mohan Gupta** - 5th June 2026

👁 51 💬 0

Mauritius has taken a significant step toward strengthening its renewable energy sector by launching a 220-megawatt (MW) renewable energy tender aimed at reducing the country's dependence on imported fossil fuels. The initiative forms part of the island nation's broader strategy to increase the share of clean energy in its electricity mix and improve long-term energy security.
